

New Components and Features

We are constantly updating our products with new features based on feedback and continued research. Below are details on the newest components and features we have added since the last release.

Online Reference pages for these features are available and if you need further assistance, you can contact your account manager at vision.support@granicus.com.

visionLiveTM Enhancements

Forms - Digital Signature Enhancements

Test Mode

The option for enabling/disabling **Test Mode for Digital Signatures** can now be viewed while editing the **Advanced Options** of the Form field:

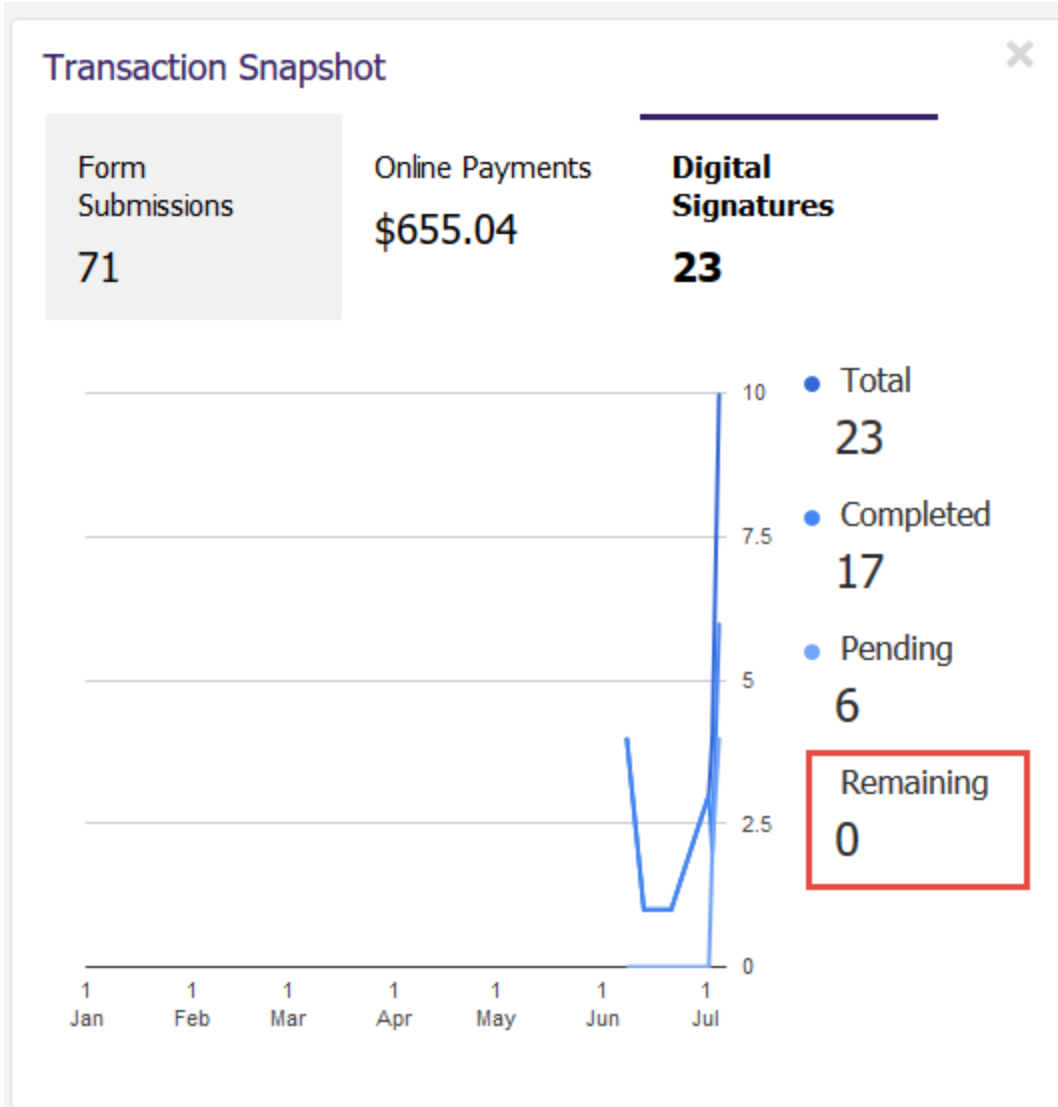

The screenshot displays the configuration interface for a digital signature field. On the left, the 'Field Setting - Digital Signature' panel is open to the 'Advanced Options' section, where the checkbox for 'Enable "Test Mode"' is checked. A red arrow indicates that this setting is applied to the form preview on the right. The preview shows a form field labeled '(CURRENTLY IN TEST MODE) Digital Signature' with a help icon. Below the field are input boxes for 'Signer Name' and 'Signer Email'. A note at the bottom of the preview states: 'Note: Upon completion of this web form a signature page will automatically generate. It is here that you will be required to provide the final legally binding signature.'

If checked, the **Enable "Test Mode"** option prepends the **Digital Signature** field with **(CURRENTLY IN TEST MODE)** to inform potential respondents that the **Digital Signature** is non-binding. Likewise, any signatures submitted while in **Test Mode** will not count against the purchased total.

*(NOTE: **Test Mode** is set to read-only by default. Please contact Support (vision.support@granicus.com) if you would like to obtain Digital Signature credits and disable Test Mode)*

Transaction Snapshot Dashboard Block

The **Transaction Snapshot Dashboard Block** has been updated to display the remaining quantity of **Digital Signatures** credited to your website. Click on the **Digital Signatures** tab and you'll see the new heading **Remaining** along with the quantity of credited signatures.

*(Note: The **Online Payments** tab only appears if your site has Online Payments enabled. If you would like more information on having **Online Payments** integrated with your website, please contact Support: vision.support@granicus.com)*

Digital Signature Quantity System Variable (Internal ONLY)

A new **Sysadmin-only System Variable** has been created to manage the number of **Digital Signatures** allotted to a given client. Sysadmin are able to add the purchased quantity to the variable, in turn allowing the client to begin accepting valid **Digital Signatures** instead of using **Test Mode**. To ensure that clients do not go over their limit, an email is sent to both the **Default From Email** address as well as the Tech Support team when 80% and 100% of the **Digital Signatures** have been used.

Digital Signature Threshold System Variable (Internal ONLY)

If a site uses all of its credited **Digital Signatures** we do not want to disable the ability to process form submissions. Once the **Digital Signature Quantity** is depleted, the **Digital Signature Threshold** acts as an overflow. Clients are billed for these signatures at the a la carte rate of \$1.50/each. Once the number of processed **Digital Signatures** meets the threshold total, the fields are reverted to **Test Mode** site-wide.

Performance Improvements

We strive to provide you and your constituents with the best experience on your website. In order to provide a better overall customer experience, we made the following improvements to your visionLive CMS:

- **Deprecate Kendo JavaScript Library:** To minimize load times we have begun deprecating the usage of the Kendo JavaScript library on the front-end. The Kendo JavaScript bundle is the largest file loaded, thus reducing its footprint was necessary for improved performance.
- **Remove Disk Space Dashboard Block:** Due to performance issues associated with the **Disk Space Dashboard Block**, it has been removed from the Dashboard Block selection.
- **Optimized Calendar Grid Pages:** The viewable Calendar Grid pages are limited to the same year as the earliest or latest event. If a user tries to view a Calendar page earlier or later, they are redirected back to the current month. In addition to general site performance this change positively impacts search engine optimization.

Bug Fixes:

Excluded from this list: Bugs that were both introduced and fixed since the last release (were never "live") and bugs that were specific to our development sites.

Calendar (TFS #28950)

Fixed issue that caused Calendar Box Widget to redirect to a broken page if Category filter was used.

Forms (TFS #29246, 29262)

Fixed issue with Date/Time field causing errors when a prepopulated value is set.

Fixed issue with Attachment field creating two upload windows when Google Chrome users click "Browse..." button.

Pages (TFS #28863, 29309)

Increased Meta Description field to 350 characters.

Fixed issue with redirect links or buttons causing nested Preview iFrames.

RAD Editor (TFS #28808)

Resolved issue with the URL field sizing.

Topics (TFS #27439)

Fixed issue with Topic Report email links redirecting to non-existent pages.

WCAG (TFS #28283)

Resolved issue with repeated ID elements for eNotification categories on the front-end.
