# Improve efficiency with better communication

An Intranet for your organization and employees is a great complement to your Vision-hosted website - and can improve efficiency by streamlining internal communications, increasing productivity, and building collaboration between departments.

A Vision Intranet can be bundled with your initial website development or added in a subsequent phase. In either case, you benefit from having a single, flexible and easy-to-use CMS platform that meets your external and internal needs.

Implement On Premise

The Intranet will be hosted on your servers, behind your firewall, **ensuring security and privacy for your data**.

Your Intranet site will have its own **unique homepage layout, navigation and design** - and can have different color schemes, buttons and photos independent of your public-facing website.

Leverage Vision's CMS

Your Intranet will be a **separate implementation** of the CMS from your public website but will include similar functionality. This allows you to use familiar components without additional training.

- Document Central
- News
- Calendar
- Forms
- Staff Directory
- Workflow

Share Content Easily

Using built-in RSS feeds, you will be able to post information such as news and events from your public website without duplicating effort.

For tighter integration, we have an optional **Content Sharing package** that allows you to publish News, Calendar, Staff Directory and Job Postings to both your Intranet and public-facing website.
