Software Services
visionLive™ 2015 Enhancements

Our visionLive™ subscription service is constantly evolving, and new or updated features are added on a monthly basis.

Here's a summary of the key enhancements we made to visionLive™ during 2015.

Hosting Updates	Description and Benefit
DDoS Mitigation	Distributed Denial of Service (DDoS) attack protection is now standard for all visionLiveTM customers. We implemented a state-of-the-art DDoS mitigation system designed to mitigate the world's largest and most complex attacks.
Disaster Recovery	Complete disaster recovery services are now standard for all visionLiveTM customers. In the event of a failure at our primary data center, your website will transfer to our backup data center. The system recovery time is less than 90 minutes, and data is replicated every 15 minutes. A premium option is available to reduce the recovery time to less than 5 minutes (available for an extra cost).
New Functionality	**Description and Benefit**
visionMobile Designer	Move, hide and reorder content for your mobile site, making information easier to access, read and use on small screen devices.
APIs	Back-up, archive, export or create a custom data display using our new Application Programming Interfaces (API) in the CMS.
Content Sharing Package	We have an on-demand library of training videos that provide how-to overviews for using most of our key CMS components.
Custom Fields	Add additional data fields to components to customize them to suit your unique needs.
Import and Export	Easily pull content in and out of the CMS, allowing you to quickly populate information to your website and pull information out to use in other systems as needed.
Existing Functionality Updates	**Description and Benefit**
Direct Media Upload from WYSIWYG Editor	Upload images and documents directly from the desktop into the WYSIWYG editor, streamlining the creating and editing of content.
Document Central and Image Library	Sort Document Central and Image Library alphabetically or by last updated date, making it easier to quickly locate the file you seek.
eNotification Bundling	End-users can bundle their individual eNotification emails into one daily, weekly or monthly email to give them control over the frequency of emails.
HTML5 Uploader for Documents and Images	Upload documents and images with HTML5, eliminating the need to download a plug-in in order to drag-and-drop.
Mobile Responsive Tables	Enjoy enhanced views and responsiveness of tables, providing an improved experience viewing tables on mobile devices.
Touch Screen Support	Enjoy improved touch screen menu selection, optimizing the navigation experience for mobile users.
Track Changes in WYSIWYG Editor	Track changes in the WYSIWYG editor, allowing you to see edits made by users as you can in Microsoft Word.
Upgraded WYSIWYG Editor	Enjoy an upgraded WYSIWYG editor, improving performance, usability and browser support.
Flexible Navigation Menu Options	Choose to display pages in the main navigation, side navigation, both or neither, giving you the ability to manage the navigation experience of your website.
Full Screen View in Content Editor	Content editors can now expand the content editor to use the full screen of their computer, improving their ability to edit and update content.
