

# Representing Communities

Carver County, MN

## More About Carver County

As a growing county near the Twin Cities in Minnesota, Carver County sought to redesign its website in order to provide a more intuitive experience for residents looking to conduct business with the county online. Through the UX Analysis, they uncovered key needs of their community that ultimately informed the selection of the links on the homepage as well as the site's navigation. The resulting website not only showcases the beauty of the area, but provides a highly functional, mobile responsive portal for Carver County's community.

*“From the initial consulting to our website launch, Vision was an outstanding partner in our website redesign project. Every unique request or requirement was successfully managed and implemented by our Project Manager and Vision’s design team. Through this partnership with Vision, we were able to achieve our goal of creating a new Carver County website that is easy to navigate, functional, visually appealing and meets the needs of our citizens.”*
